Walling discloses a hand-held and/or hand-operated random movement-printing device that is controlled by at least one processor. Walling also discloses the hand-held printer prints a simple navigation pattern and uses the pattern for determining positions on the print medium. The prior art fails to anticipate the image being built-up through sectional printing whereby each section has at least one print area interfacing at least one other print area, said interfacing print areas being correlated to fill-out transition print areas during printing of said sections through at least on transition printing pattern by omitting printing of some pixels in said transition print area.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, would preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance."
